Concert Technologies' Nationwide Rollout White Paper Defines Most Efficient Organization of Deployment Services

Latest White Paper Describes Technology Rollout Services Model that Reduces Costs, Time, and Management Requirements

DULLES, VA, NOVEMBER 25, 2008 – In its latest technology rollout white paper, “*Increase Nationwide Rollout & Global Technology Deployment Service Efficiency*,” Concert Technologies defines criteria to evaluate the services offered by a technology rollout company and their capabilities for deploying multi-technology, multi-service, multi-site rollouts, nationwide or internationally.

This paper informs solution providers and end users alike as to the benefits of minimizing site visits, organizing services into components, and choosing the right Deployment Method for their projects. This translates to lower project costs,

accelerated deployment speed, and less stress for their management teams, allowing them to focus on their core capabilities.

“Having a defined Rollout Services Model is integral to rapidly deploying nationwide and global rollouts,” explained Dennis Mazaris, President and Founder of Concert Technologies. “From our experience, components are without a doubt the best way to do this.”

Components organize services in a format that makes comprehension and discussion easier at the level of detail necessary for nationwide or global technology rollouts.

“With the increased popularity of Unified Communications and IP technologies, customers are looking for companies that can provide more than one service at each site location. Having a Technology Rollout System with all components working in unison provides expert rollout services that lower project costs and accelerate deployment speed,” stated Mr. Mazaris. “That’s what our customers expect and that’s what we provide.”

This is the second white paper in a four-part series that explains for the first time how a Technology Rollout System and its four comprising parts provide the most cost-effective and time-efficient implementation services possible.
